CHUCK 4 GRINDING

SCHAUBLIN

CHUCK4GRINDING

PATENTED

SPR25 is the new **QUICK-CHANGE COLLET** system of SCHAUBLIN.

The chuck and its collets are ideal for **RE-GRINDING operations** in tool-grinding, where multiple collet changes take place during the day

Features

- Manual or automatic collet change
- 75% set-up time reduction in manual mode
- High runout repeatability
- Clamping range $\varnothing 3.0 - 21.0$ mm

The SPR25 system can be adapted to every tool-grinding machining that allows automatic collet clamping

←**SPR25**→

HOW IT WORKS

Collet change happens through a simple **CLICK SYSTEM**.

The collet can be pushed in, and pulled out manually (with an extraction tool) or automatically (adapting the robot hands to the extraction groove of the collet)

A completely new-designed collet
